Professional Summary

Computer Science student (Cloud & Mobile Computing) with hands-on Information Management training from NTI, specializing in Enterprise Content Management (IBM FileNet P8, Content Navigator, DataCap, OpenText Content Server) and Business Process Management (IBM BPM Levels 1–3) — including taxonomy design, content security, and workflow automation. Complemented by a Flutter/Dart development internship at Egypt's Ministry of Communications and Information Technology and solid Business English and project management fundamentals.

EXPERIENCE

National Telecommunication Institute (NTI) — Application Development and Integration Cairo, Egypt | Jul 2026 – Nov 2026

- Completing an intensive Information Management training covering Enterprise Content Management (IBM FileNet P8 administration/development, IBM Content Navigator, IBM DataCap, OpenText Content Server) and Business Process Management (IBM BPM Levels 1–3).
- Building and securing taxonomies, subscriptions, and custom tools on FileNet P8; developing workflows, coach views, and REST API integrations in IBM BPM.
- Completing a parallel Career Development curriculum (Business English, leadership, project management, professional ethics), culminating in a Capstone Project presentation.

Ministry of Communications and Information Technology of Egypt — Cross Platform App Developer Cairo, Egypt | June 2025 – December 2025

- Developed 3+ cross-platform mobile applications using Flutter and Dart as part of a government-funded intensive software development program.
- Implemented state management using BLoC/Cubit architecture, reducing UI logic complexity and improving code maintainability.
- Integrated Firebase services (Authentication, Firestore, Storage) and consumed RESTful APIs with clean JSON parsing using Dio.
- Applied Clean Architecture principles (data, bloc, presentation layers) and UI/UX best practices to deliver production-quality app structure.

IGS — Flutter UI Developer Intern Cairo, Egypt | Nov 2025 – Nov 2025

- Built fundamental Flutter UI components including custom widgets, lists, navigation flows, and form screens using Material Design guidelines.
- Practiced widget lifecycle management and stateful/stateless widget composition across 5+ hands-on project exercises.
- Developed responsive layouts adapting to multiple screen sizes using Flutter's flexible layout system.
- Gained foundational experience with Dart language features including null safety, async/await, and OOP principles.

GazeGuard – Eye Fatigue Detection Desktop App

- Developed a Flutter desktop application that monitors user eye activity in real-time using computer vision to detect fatigue and trigger timely break alerts.
- Integrated a Python backend using OpenCV and MediaPipe for gaze tracking, communicating with the Flutter frontend via local process bridging.
- Implemented a dual-mode alert system delivering in-app overlay notifications or native Windows toast alerts based on application focus state.
- Architected using BLoC-driven session management to handle fatigue state transitions, demo timers, and exercise content routing.
- Tools: Flutter, Dart, Python, OpenCV, MediaPipe, BLoC, PyInstaller

Rash7ly – Community Recommendation App

- Built a location-based recommendation platform in a 5-member team, enabling users to browse and filter places by area across multiple categories (cafes, hotels, electronics).
- Implemented a ratings and reviews system with pros/cons commenting, driving community-sourced feedback and user-generated content.
- Integrated an AI chatbot feature to deliver quick, personalized place suggestions.
- Developed a gamification system rewarding users with points when their recommendations receive high ratings, increasing engagement.
- Tools: Flutter, Dart, Firebase, Cloudinary, BLoC/Cubit

Bookia – Book Store App

- Developed a full-featured bookstore app with complete authentication flow (login, registration, OTP password reset) using Cubit for state management.
- Consumed RESTful APIs via Dio HTTP client with clean JSON parsing, handling async states across 8 screens including cart and wishlist.
- Structured the codebase following a feature-first layered architecture (data, presentation) with GoRouter for declarative navigation.
- Tools: Flutter, Dart, REST API, Dio, Cubit, GoRouter, SharedPreferences

EDUCATION

Canadian International College (CIC) — Bachelor of Science in Computer Science

Cairo, Egypt | Oct 2022 – Jun 2026

Major: Cloud & Mobile Computing | GPA: 3.26

specialized in cloud infrastructure, virtualization, and Mobile Application Development

Completed coursework in database systems, full-stack development, machine learning and Native Mobile Development

TECHNICAL SKILLS

Languages: Dart, Python, C++, Java

Mobile: BLoC/Cubit, Firebase (Auth, Firestore, Storage), REST APIs, Dio, Hive, GoRouter

Tools & Platforms: Git, GitHub, Android Studio, VS Code, SQL

Design & Prototyping: Material Design, Responsive UI, Custom Widgets, Lottie Animations

Productivity: Excel, Word, PowerPoint, VS Code

SOFT SKILLS

- Teamwork
- Time Management
- Adaptability
- Communication
- Attention to Detail
- Critical Thinking
- Problem-Solving
- Fast Learner

LANGUAGES

Arabic - Native

English - Fluent
